How to thread janome new home sewing machine

CC0/twarezak/Pixabay One of the most satisfying things you can do is create something for yourself or home. Sewing is one of the best ways to make something with fabric. Whether you're designing and making clothes or creating draperies or other items for the home, you can sew your own outfits and decor easily. Sewing allows you to produce custom creations and even save money. It doesn't matter if you're a beginner or expert; you can find used sewing machines online for any budget. Here are some tips on how to find a good used sewing machine online. Find Sewing Machine Retailers Online You might be surprised by how many retailers sell sewing machines online. And so many of these online stores have pre-owned machines in stock at just about every price point. You can find sewing machines that perform the basic tasks and ones that perform astonishingly advanced functions. Many retailers have refurbished their machines and back their used products with limited warranties or certifications, while some sales are final. Ask questions before you commit to buying them. Some of the machines you find online come with extra accessories, while with others, what you see in the listing is what you get. Craigslist Is a Good Local Option If you want to look at something locally, Craigslist may be your best online option. The vast majority of Craigslist entries include photos and detailed descriptions, and you can ask questions of sellers before you agree to purchase. Some sellers are even willing to barter or trade with you for a used sewing machine. Know that you're buying most anything as-is on Craigslist. It's also important to protect yourself when visiting a seller. You should never agree to meet a seller alone or in a private place. Meet the seller in a public area — even a local police station — and take a friend or family member with you. When you're buying from Craigslist, it's always better to be safe than sorry. You Can Find a Machine on eBay Don't forget about eBay when you're looking for used sewing machines online. The auction website offers used sewing machines that you can bid on, some that you can make offers for and some that sell at fixed prices. The possibilities are endless — you can find everything from inexpensive, basic machines all the way up to advanced, pricey equipment. You can search by brand or price point, and you can narrow down your search in several ways. One of the nice things about eBay is that the site offers buyer protection so that you're not at a loss if you're not satisfied or if something happens to the machine in transit. Look for Other Online Auctions or Estate Sales Sometimes you can find a good used sewing machine through an auction house or estate sale. These can be local, or they may be located far away from you. Often in these cases, these items have only had one owner or the owner has taken good care of them. If you can view these items online, you can virtually inspect what you're interested in before you commit to purchasing it. As in every case, feel free to ask questions, and never commit unless you're completely comfortable with what you're buying. In most cases, these items are sold as-is with no guarantees or warranties. Facebook Interest Groups and Sale Pages Are Worth Looking At These days, you can find just about anything you're looking for on Facebook — and that includes used sewing machines. Get involved in sewing interest groups. Not only will you learn something new, get to share your knowledge and make friends, but you also may discover friends who have used sewing machines for sale. You might even find something you're interested in through yard sale groups. The nice thing about these groups is that most of them are local to you, so you may find a used sewing machine that you can pick up close to home. Look carefully at what people are offering before you buy it, because chances are you're buying as-is. MORE FROM QUESTIONSANSWERED.NET Update: I have since created a much better tutorial for how to thread your sewing machine right here and it's still my Janome sewing machine You can watch the video for how to thread a Janome sewing machine or read the step-by-step instructions below. Want to see more videos on how to setup your sewing machine and get sewing? See my Learn to Sew videos here Or click here to watch this video on YouTube In my experience I have found that many sewing machines are threaded in a similar way. There are some slight differences with thread guides that, if they are missed, may impact the timing on you machine. This is why I created a video and instructions for how to thread a Janome sewing machine in particular. You will need: Sewing machine (I'm using a Janome DC2101) thread Bobbin Step 1 - Wind the Thread onto the Bobbin Place your thread onto the spool pin and secure in place with the spool disk. place the thread around the bobbin thread guide at the top of the machine (there should be a picture diagram at the top next to the bobbin thread guide). Put the thread through the hole on the bobbin going from the inside to the outside. hold the end of the thread with your finger tips while you push the bobbin onto the bobbin spindle. Push the bobbin spindle over to the right to engage the automatic declutch function (this automatically stops the needle from going up and down). Some older machine may also require you to pull out the hand wheel if you don't have the automatic declutch function. Press the foot pedal and wind until you have the desired amount of thread on the bobbin. Remove the bobbin from the spindle and snip the little piece of thread from the beginning of the winding process and cut the thread to detach the bobbin from the rest of the thread on the machine. Step 2 - How to Thread a Janome Sewing Machine Take your thread out from around the bobbin thread guide and place it around the thread guide at the top of the machine. run the thread down the line on the front of the machine and under and to the left and head back up the thread guide towards the take up lever. put your thread through the hole at the front of the take up lever. There should be a little gap at the back of the take up lever for you to slide the thread through easily. Run the thread back down the same thread guide line that you just came up until you get to the bottom of the plastic casing of the sewing machine. There should be another thread guide that you will need to slide the thread behind. At the top of the needle bar there will be one last hook to the left that you need to slide the thread behind. Use the automatic threader to put the thread through the eye of the needle or do it by hand. Step 2 - Load the Bobbin into the Top Loading Casing Remove the hook cover plate (or the bobbin cover) from the top loading bobbin case. hold the bobbin so the thread is going in a counter clockwise direction and insert it into the bobbin casing. Run the thread through the first thread guide groove and in between the tension spring blades. while holding the top thread, turn the hand wheel towards you. you should see the top thread going over the bobbin. Once the top thread has gone all the way over the bobbin, gently pull the top thread and that should bring the bobbin thread up with it. ensure that both pieces of thread are under the foot and place towards the back of the machine. If you are unsure of any of these steps you can watch the clear step by step instructions in the video. You now know how to thread a Janome sewing machine well done! Photo Courtesy: Pixabay For generations, people made their own clothing. These days it's not a necessity, but it's a way to inspire and engage your creativity. Maybe you want to make or refresh some clothes, or maybe you want to work with other fabrics. A sewing machine is a terrific way to put your creativity to work. How do you find the right sewing machine for your needs? Here are the best, as rated and reviewed by consumers just like you. MORE FROM CONSUMERSEARCH.COM Buying a used sewing machine can be a money-saver compared to buying a new one, but consider making sure it doesn't need a lot of repair work before you buy. Repair costs can eat up your savings if a used sewing machine won't stitch properly. Machines for Different Types of Sewing The type of sewing you plan to do affects the type of used sewing machine that's going to perform best for you. If you're new to sewing and want a machine to learn on, look at older machines made of metal with metal inner workings, such as older Singer sewing machines. Metal sewing machines typically stand up better to the kind of abuse a new sewing artist dishes out. If you plan to do advanced sewing or designer-level garment making, newer machines typically perform more functions, but they're made of plastic and have plastic inner workings that break easily. Consider Saying No to Rust A sewing machine is a precision household tool. What appears to only be a small amount of rust can be enough to do a lot of damage to a used sewing machine. Corrosion can even cause a sewing machine to completely seize up. Unless you're looking at a valuable vintage machine, consider passing on the purchase if you see rust on the machine. If you do buy a machine that has some rust, coat the rusty area with stainless oil and let it soak in before trying to use the machine to avoid damaging it by forcing it to run while covered in rust. Turn the Balance Wheel The balance wheel is the knob on the sewing machine head that spins when the machine is working. To initially inspect the machine, you don't want it to spin fast. Unthread the needle. Turn the balance wheel toward the front of the machine, moving it slowly by hand. This lets you see if the needle goes up and down properly. It should turn smoothly and shouldn't catch. Raise the presser foot lever and watch under the presser foot to make sure the feed dogs are moving properly. Finally, open the cover over the bobbin and watch to see if the case around the bobbin is turning. Extra Features to Consider While older metal models typically make one or two different stitches, a straight stitch and a zigzag stitch, newer plastic sewing machines may make numerous different types of stitches, such as embroidery designs and stretch stitches. Newer machines that make a variety of stitch styles provide designing potential, but it's at the cost of a machine that doesn't last as long. Inspect it for Missing Parts and Screws It can be hard to find parts for used sewing machines, especially older ones, and everything has to fit together perfectly for a machine to function properly. Look over the machine you're considering carefully to see if all the parts are on it. Check for empty screw holes, and check in the bobbin case to make sure it's all there. If you aren't sure how a bobbin case should look, bring up a picture of a sewing machine bobbin case online before you buy a used machine so you'll know if it looks right.
